Sustainable Forest Management

- Pioneered landscape level ecosystem management
- Canada seeks a balanced science-based approach between environmental, social and economic needs over time
- Key features of SFM in Canada include:
 - Legislation, regulations, policies for forest management
 - Conservation of biodiversity
 - Adaptive management
 - Monitoring and assessment
- Public consultation is a cornerstone of SFM

Governments and Canada's Forests

- Canada's **provinces** and **territories** have jurisdiction over lands and resources management
- **Federal roles** on forests:
 - International trade and foreign policy
 - Aboriginal affairs
 - Economic and fiscal policy
 - Management of federal lands
- **Shared responsibilities:**
 - Environmental protection
 - Science and technology

*Co-management agreements with **Aboriginal Peoples** represent another form of forest governance in Canada*

Canada

Canada – 1st in forest certification

- Three internationally recognized standards in use in Canada:
 - Forest Stewardship Council (FSC)
 - Canadian Standards Association (CSA)
 - Sustainable Forestry Initiative (SFI)
- Largest amount (138 M ha) of third party certified forest area in the world
- 40% of global certification

Conclusions

- Canada is steward of a vast public endowment.
- The reality –
 - the forest is a renewable resource
 - commercial harvesting takes place on less than 1% of forest land;
 - disturbances are part of the natural forest cycles
- There are many checks and balances to ensure sustainable forest management.

Forestry in Canada is about sustainable management of a renewable resource where multiple values and interests are represented to ensure the long-term health and well-being of both Canadians and our forests.
